

INCITS 420 Editor's Note for the Point Of Sale Profile:

During ANSI/INCITS review of the Point Of Sale profile a discrepancy was noted which requires direction from M1.4.

The security clause 7 currently reads as follows:

POS use of biometrics shall follow biometric data protection techniques in ANSI/X9 X9.84 or ISO/IEC 15408:1999 to safeguard the biometric data defined herein for confidentiality, integrity and availability, in accordance with local, regional or national policy considerations.

However, the ISO/IEC 15408:1999 standard document is not included in the list of normative documents in clause 3.1.

Also, it was noted that this standard has been superseded by a 2005 revision and is a multi-part standard with three parts.

The editor would like to have M1.4 consider whether the profile should:

- (a) Continue to refer to the 1999 version in clause 7 and include it in the list normative documents in clause 3.1.
- (b) Update clause 7 to refer to the three parts of the 2005 revision, and include these three parts in clause 3.1.
- (c) Identify in clause 7 the use of ISO/IEC 15408:2005 and ISO/FDIS 19092:2006 (Financial services -- Biometrics -- Part 1: Security framework) standards for this profile (removing the use of the ANSI/X9 X9.84 standard), and include these other standards in the list of normative standards in clause 3.1.

Upon direction, the project editor will submit to M1.4 a revision for consideration.
